

# Before installing ensure that the LSS/SUMA is not previously installed in your computer

---

Sometimes you can have a problem with the installation due some inconsistencies in the windows register or due a previous LSS is already installed. In this case a possible solution can be:

## 1 Uninstall the LSS and MSDE from your computer

- 1) Un-install all the references to **LSS** from the control panel, with the Add or Remove Program option,
- 2) Un-install all the references to Microsoft SQL Server Desktop Engine (**LSSINST**) from control panel, with the Add or Remove Program option,
- 3) Delete the directory C:\Programs Files\Microsoft SQL Server\MSSQL\$LSSINST of your computer before installing any new version.
- 4) Delete the directory C:\Programs Files\LSS of your computer before installing any new version.

## 2 Rename your computer name to refresh the windows register

- 1) Select My Computer and then right click
- 2) Select "Computer Name" tab
- 3) Assign a new name to your computer. If you are working with a domain or using your computer in a network, contact your network administrator before proceeding with this change.

## 3 Restart the computer

## 4 Install the LSS again ensuring that is a local installation.

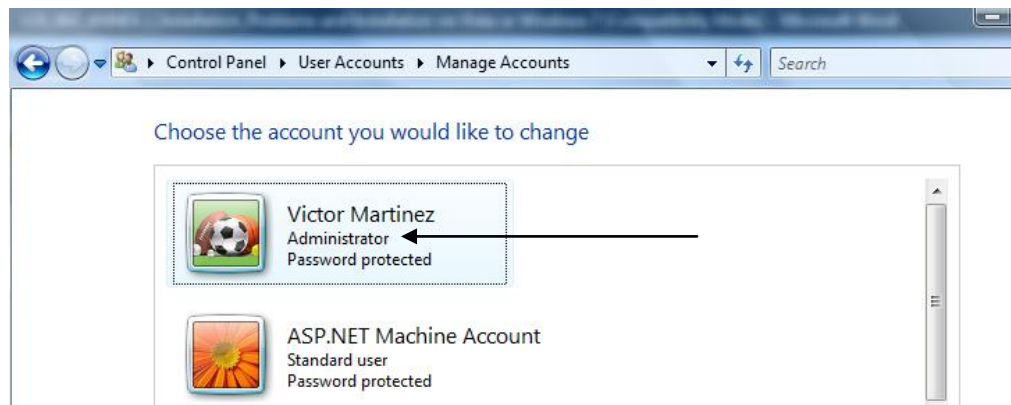

# Install in Windows Vista / Windows 7 / 8

Due Vista and Windows 7 / 8 particularly conditions it is required to take into consideration the following requirements

Before install in Windows 7/8 or Vista, remove any previous installation of the LSS or the LSS instance: Use Annex I for instructions.

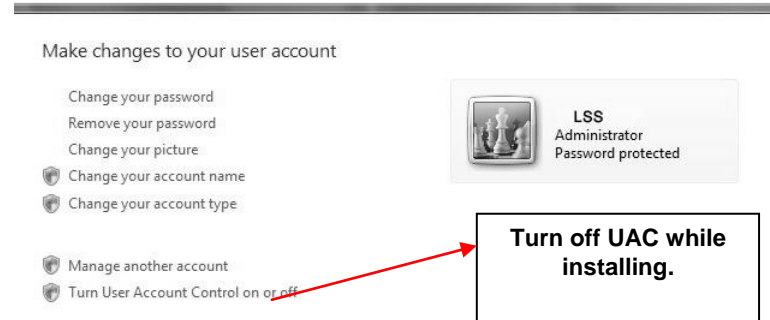

- 1) Turn off the UAC / User account control
- 2) Set up the Regional Setting to English-US while the installation of the LSS. After that you can return to the original setting.
- 3) Turn off any antivirus while installing and ensure that the LSS is allow it to be run by your antivirus.
- 4) Install the framework and framework update before installing the LSS application. Be sure that you are log in as Administrator user.
- 5) Always execute the program Setup\_English. Be sure that you are log in as Administrator user.
- 6) If Windows shows a message of incompatibility and ask for search a Web solution. You should ignore that and instruct the programs that just continue. "Select RUN PROGRAM"
- 7) Authorize the LSS in your antivirus if is required or select ALLOW when the antivirus ask for it.

**Step 0: Be sure that you are log in as Administrator.**

## Step 1: Turn off the UAC / User account control

- 1.1 Go to Control Panel
